

Fleet Service

Grease Monkey provides quick, convenient, affordable service for your organization's fleet. For details on setting up local fleet service for your organization, ask your center manager.

Franchise Information

The Grease Monkey organization has more than 235 vehicle preventive maintenance service centers across the United States and in Mexico, and the market potential for Grease Monkey centers continues to increase. For franchise information, contact Grease Monkey International, Inc. at 800-364-0352.

Customer Satisfaction Hotline

Grease Monkey International welcomes any comments you may have. Please call us at 800-570-9710, or e-mail us at marketinginfo@greasemonkeyintl.com.

You can also find out more information about Grease Monkey by visiting our website at www.greasemonkeyintl.com.

Preventive Maintenance Services

ONLY WHAT YOU NEED.
GUARANTEED.

Grease Monkey Preventive Maintenance Services

Grease Monkey services most makes and models of vehicles, and you never need an appointment. Let us take the worry out of costly repairs or breakdowns by regularly maintaining your vehicle.

Most vehicles come with a manufacturer's warranty that requires you to maintain it with periodic services. Grease Monkey has trained technicians who keep you informed of your vehicle's needs in accordance with manufacturer specifications. We also keep a complete maintenance history for you. Grease Monkey preventive maintenance services are offered at less than most dealership prices!

Benefits of Regular Service at Grease Monkey:

- Saves you money by avoiding costly repairs
- Saves time, because you get quick service with no appointment necessary
- Extends the life of your vehicle's engine and other vital components
- Ensures proper care from trained technicians
- Maintains your manufacturer's warranty
- Maximizes fuel economy
- Increases your vehicle's resale value
- Reduces environmental pollution
- Keeps you and your vehicle safe and gives you peace of mind

Full Service Oil Change

Every Full Service Oil Change is a preventive maintenance review for your vehicle, and includes*:

- Change oil (up to 5 quarts)
- Install new oil filter
- Lubricate chassis
- Check air filter
- Check breather element & PCV valve
- Check/fill power steering fluid
- Check/fill battery fluid
- Check/fill windshield washer fluid
- Check/fill transmission or transaxle fluid
- Check/fill rear differential fluid
- Check engine coolant level
- Check windshield wiper blades
- Check and set tire pressure
- Check all exterior lights
- Wash exterior windows
- Vacuum interior

* Most vehicles as applicable

Preventive Maintenance Services

Full Service Oil Change—Our Levels of Service

- Regular** Uses regular motor oil to extend the life of your vehicle's engine.
- Semi-Synthetic** Uses a combination of regular and synthetic motor oil for added fuel economy and performance.
- High Mileage Performance Boost** Specifically formulated for higher mileage vehicles to increase fuel economy and compression, while reducing oil consumption, wear and oil burn off.
(Available at participating locations.)
- Synthetic** Uses synthetic motor oil for maximum fuel economy and performance.

Air Conditioning Service

Chill out in the summer time!

Using approved equipment, our Certified Technicians will check, vacuum, purge and recharge your air conditioning system. A properly charged air conditioning system will significantly reduce the potential for major repairs.

(Available at participating locations.)

Air Filter Replacement

The air filter keeps contaminants out of the engine's moving parts.

Air filter replacement keeps the engine free of airborne contaminants, for improved engine performance, fuel economy and lower emissions output.

Automatic Transmission Fluid Exchange Service

The transmission gets power from the engine to the wheels via a series of gears.

100% of your used transmission fluid is exchanged and replaced with new transmission fluid. This will extend the life of the transmission by providing resistance to oxidation and the formation of sludge and varnish. Fresh fluid with anti-wear properties prevents wear or scoring of the gears, clutch bands and discs, promotes smooth shifting, and minimizes risk of premature transmission failure.

Automatic Transmission or Transaxle Service

The transmission gets power from the engine to the wheels via a series of gears.

Commonly referred to as a fluid, filter and gasket service, this service prolongs transmission life and reduces excessive transmission wear, rough shifting and/or premature transmission failure. During this service, the old transmission fluid and filter are removed, the transmission pan is cleaned and new transmission fluid is added. A new filter and gasket are then installed.

Cabin Air Filter Service

This service keeps the air flow clear and clean within the passenger compartment of your vehicle.

The Cabin Air Filter removes the dust, pollen, mold spores and other particles that can flow inside the passenger compartment of your vehicle, especially in certain driving conditions such as city driving, dusty roads and industrial areas.

(Available at participating locations.)

Differential Service

The differential allows wheels to turn at different speeds, enabling corner turning with improved traction.

Service prolongs the life of your differential by removing the old, contaminated gear oil and installing new fluid to help reduce differential wear.

Exterior Lighting Inspection & Replacement

See and be seen!

Grease Monkey provides a free exterior lighting inspection with every Full Service Oil Change. Replacing burned out lights ensures your legal compliance and your safety. *(Available at participating locations.)*

Fuel & Emissions System Cleaning Service

The fuel system provides power to your engine.

Service removes fuel-related deposits from fuel system and valves, reducing problems such as surging, stalling, hesitation and poor fuel economy and helps restore performance, mileage and power; helps pass emissions tests.

(Available at participating locations.)

Fuel Filter Replacement Service

Clean fuel is essential for efficient engine performance, and fuel filters remove unwanted contaminants from the fuel system.

Replacement of a restricted or plugged fuel filter enables contaminants that may cause serious and expensive damage to the system components to be removed.

(Available at participating locations.)

Manual Transmission Service

The transmission gets power from the engine to the wheels via a series of gears.

Replacing the old fluid with clean fluid increases the life of a manual transmission by better cleaning and lubricating moving parts of the transmission.

Provided For Your Convenience.

PCV Valve & Breather Element Replacement

The PCV (positive crankcase ventilation) valve and breather element let your vehicle run cleaner and help reduce the formation of sludge and contaminant buildup.

Replacement contributes to longer engine life.

Power Steering Fluid Flush Service

The power steering system operates as the control system for your wheels.

With the Power Steering Fluid Flush Service, your old fluid is removed, your system is cleaned and fresh power steering fluid that is designed for your vehicle is replaced. (Available at participating locations.)

Radiator Cap Replacement Service

The radiator cap is the pressure sensitive component of the radiator system.

A radiator cap that is no longer at its specified pressure rating will allow antifreeze to release. The system then operates hotter than designed, causing the antifreeze to deteriorate more rapidly than intended. Your Grease Monkey technician will inspect the radiator cap when performing a Radiator Flush & Fill Service and inform you if yours needs to be replaced. (Available at participating locations.)

Radiator Flush & Fill Service

The radiator keeps your engine from over-heating in warmer months and freezing-up in the winter.

Service replaces old antifreeze engine coolant and also eliminates over-heating, freeze-up, rust and corrosion, as well as lubricates the water pump.

Serpentine Drive Belt Replacement Service

A serpentine drive belt is a continuous loop belt that snakes its way through and around your engine compartment to drive power to major engine parts.

Replacing your serpentine drive belt as needed will ensure optimum performance from your engine and prevent the inconvenience of having your vehicle break down, because of belt breakage. Your Grease Monkey technician will inspect the condition of your belt and look for excessive cracks, dry rot and missing chunks.

Tire Rotation Service

Regular tire rotation extends the life of your tires.

Manufacturers recommend rotating your tires to promote uniform tread wear and improve vehicle performance. (Available at participating locations.)

Transfer Case Service

The transfer case is a gearbox found on most four-wheel drive vehicles which directs a portion of the power from the transmission to the front and rear wheels.

Service replaces the old fluid and extends the life of the transfer case by reducing wear and gear flaking, minimizing the effects of oxidation deterioration due to heat and high speed driving, and improving lubrication efficiency by reducing high speed foaming of fluid.

Wheel Balancing Service

Prolong the life of your tires!

The Wheel Balancing Service minimizes vibrations and pulling, minimizes wear on your tires, and allows tires to rotate more freely. (Available at participating locations.)

Wiper Blade Replacement

See more clearly in rainy weather!

Safety is improved by providing the driver optimum visibility of road conditions, pedestrians and other vehicles. Winter blades help prevent freeze-ups and iced windshields.

For specific service intervals and recommended preventive maintenance procedures for your vehicle, refer to your owner's manual or ask your Grease Monkey technician to check the resource manual for you.
